Features

1. Long and Slim armature stamping provides good heat dissipation and greatly prevents overheating, gap between armature and field is comparatively more enabling the air ventilation from fan resulting in low core temperatures.
2. Provision of additional IGP type support and bearing housing between body and gearbox provides additional support to the upper bearing and helps maintaining the armature alignment better than the conventional system of placing upper bearing directly into gearbox housing.
3. The additional housing plate between gearbox and bearing also avoids contact between armature and field incase of bearing failure and bursting events.
4. The housing plate also helps in maintaining a proper contact between gear pinion, giving a more service life.
5. zero vibration reduces fatigue of users
